

# Different world countries' GDP per capita, number of tourists and their popularity

*Taeyoung Shin*

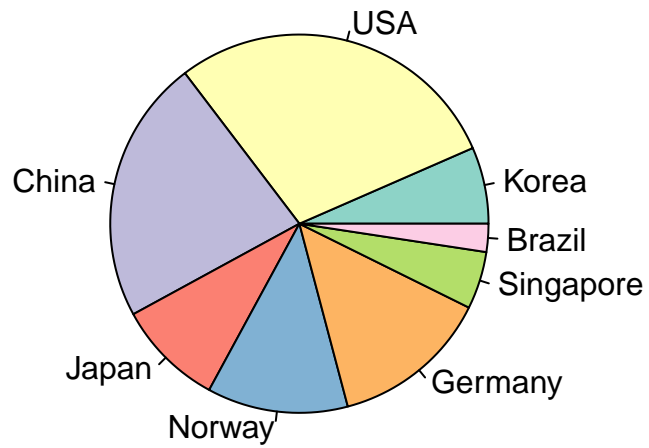

*March 14, 2018*

**Introduction:** Following graphs and charts are to be designed to demonstrate how much income that a person earns based on their GDP per capita figure. In addition, their popularity and recognition from the number of tourists visiting their countries with an annual index is shown with a list of each country.

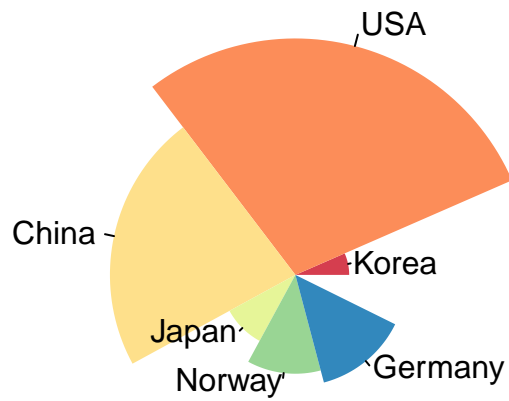

This column chart is showing the countries' GDP per capital indexes and countries. The unit of currency is dollars(\$) based on USA.

This Pie Chart is showing that the number of tourist of each country on an annual basis. As seen, the number of tourists travelling to USA and China accounts for the majority of tourist rate.

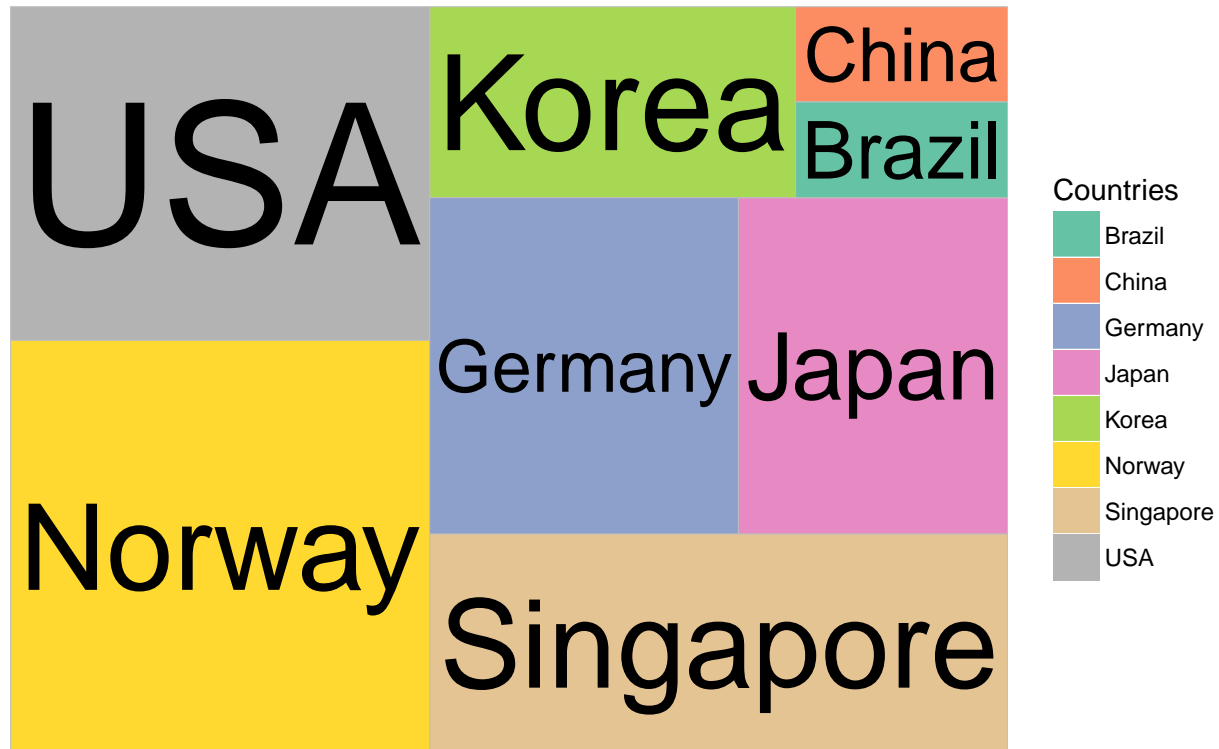

This Pie chart is showing the relative size of tourists visiting each country. As shown, USA accounts of the majority of the portion followed by China. There seems a tendency coming along that the scale of each country seems proportionate to the number of tourists.

This tree map shows the power of GDP per capita from each country. That being said, compared to their country's name recognition, the size of their area shows how strong or powerful that country is in terms of their GDP per capita.

GDP per capita of each country

These are the statistic data of each country's GDP per capita

This bar chart shows each country's tourisit visitation size. In other words, this bar chart clearly displays how many tourists visit each country within in one year. The unit is million.
